

In contemporary philosophy of science, ontological reductionism, or the claim that everything that exists in the world is something physical, is the consensus mainstream position. This book establishes that ontological and epistemological reductionism stand or fall together. The author proposes a new strategy of conservative theory reduction that operates by means of the construction of functional sub-concepts that are coextensional with physical concepts. The second part of the book works this strategy out, using the example of classical and molecular genetics. Christian Sachse is MER supplant at the University of Lausanne (epistemology, philosophy, and history of science), Switzerland. His main research interest is in the philosophy of science.

Riding on Air: A History of Air Suspension, Feminist Coalitions: Historical Perspectives on Second-Wave Feminism in the United States (Women in American History), Animals in the Zoo (Rookie Read-About Science), History, Historians, and the Past: A Book of Meditations, Regions, Nations and European Integration,
